

There's a name for the finishing touch in landscaping.

EUROPAVE
Nature's Grand Design.

Landscape architects love it for its elegance,
warm aesthetic appeal and creative flexibility.

The most attractive path to elegance:

EuroPave natural aggregate paving systems.

The resin itself is clear or colored to match chosen aggregates, UV-stable and cold applied, and applications can usually be opened to traffic within 8-12 hours. Flexible and resistant to cracking, the attractive, hard-wearing surfaces can be applied to asphalt, concrete, timber and steel.

From Windsor Castle to Malibu, landscaping is becoming more becoming thanks to Addastone and Addaset. Consider them, and other EuroPave products for your projects.

EuroPave comes in a variety of finishes, systems and textural designs and all are natural, resin-bonded aggregate surfaces including Addastone, Addapave, Addaset and Addaprint. Uses range from "stone carpets" to porous tree pit systems to huge decorative surfaces that complement surrounding landscaping and architecture, with the look of loose aggregate but without the problems.

Aggregates can be natural rock, recycled glass, or other materials and are available in a wide range of colors, styles or even customized mixes.

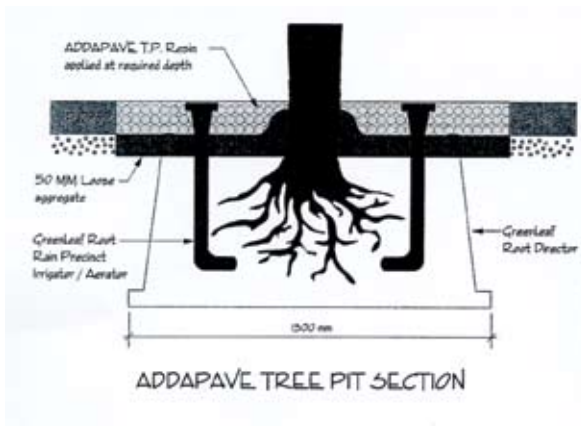

Municipal planners love it for its low maintenance, smart looks and beautiful durability.

EuroPave opens up a **gorgeous** range of **choices** for Municipal planners.

Start with Addaprint surfaces in a virtual medley of colors and textures. It's a thin-lay cold-applied road surface that can be imprinted for a paving block, or cobblestone appearance. Skid resistance may be added for traffic-calming and road marking schemes. Short curing time causes a minimum of traffic disruption for crosswalks, walkways and bike paths – or wherever your creativity dictates placement of a polymer-modified resin-based surface. Quick. Colorful. Appealing.

Addapave Tree Pit systems are the best things since iron grates. In fact they replace them. Natural aggregates or recycled materials mixed with semi-transparent resin allow trees natural growth in a well-groomed, beautifully designed porous surface. And no loose aggregate scattered about. (See diagram for root direction and irrigation/aeration details.)

Look into all the EuroPave products for colored, textural finishes for playgrounds, foot paths, parking lots, ramps and other municipal needs, indoors and out.

Homeowners love it for its curb appeal, high quality and ability to differentiate from neighboring homes.

EuroPave products are **beautifying** neighborhoods from London to Palo Alto.

Addastone is at home in Kensington Palace and the Tate Modern Art Museum – and it's available for your showplace, as are all the EuroPave products. Resin-bonded aggregate nature walkways, driveways, footbridges, and accent surfaces can enrich the look of any residence, subtly or colorfully, conveying the appearance of loose aggregate without the upkeep or maintenance problems.

Whether your home is traditional or contemporary, Addaset or Addastone surfaces offer a variety of colors that complement or set off the architecture and surroundings. Attractive, long-lasting, and low maintenance, the surfaces have a definite upscale feel and look.

The differences: Addaset is trowelled and mixed with resin, and laid to a smooth level surface. Addastone is a scatter system that gives the appearance of loose gravel without the maintenance problems normally associated with other natural aggregate systems. Both are hard-wearing and easily maintained, and are available in a number of smart, attractive colors and aggregates or recycled glass.

Finishes, colors and choices are as numerous as the advantages.

(Swatches shown are representative samples and actual colors or choices may change.)

Choose from the EuroPave product family of Addastone, Addapave, Addaset or Addaprint and pave the way to elegant, durable beauty. Hard-wearing, resin bonded Addastone features the charm of loose aggregate without the problems. Porous yet seamless Addapave allows free flow of water through its honeycomb system, making it a natural for tree management and high-traffic areas and Addaset's flexible, crack resistant surface may be used indoors or out. Addaprint's short curing time is as appealing as its cobblestone or brick appearance. EuroPave: a fine family with all the advantages.
